

<b>Category</b>	<b>Questions</b>	<b>Status</b>
<b>Code Audit</b>	Does the code follow internal coding standards and best practices?	<input type="checkbox"/>
	Are there existing bugs, redundancies, or error-prone areas in the code?	<input type="checkbox"/>
	Have automated static code analysis tools been used to detect vulnerabilities or code smells?	<input type="checkbox"/>
	Are there areas that need refactoring to improve maintainability or readability?	<input type="checkbox"/>
	Are functions, modules, and APIs properly documented for future reference?	<input type="checkbox"/>
	Is code consistency maintained in naming, formatting, and structure?	<input type="checkbox"/>
	Are third-party libraries up to date and free from risks?	<input type="checkbox"/>
<b>Architecture Audit</b>	Are software components modular, well-organized, and loosely coupled?	<input type="checkbox"/>

	Can the system scale to handle increased load or user growth?	<input type="checkbox"/>
	Is the architecture robust and resilient to failures?	<input type="checkbox"/>
	Are cloud services and third-party integrations correctly configured?	<input type="checkbox"/>
	Does the architecture align with current and future business goals?	<input type="checkbox"/>
	Are architecture diagrams available and up to date?	<input type="checkbox"/>
	Has technical debt been assessed and documented?	<input type="checkbox"/>
<b>System Quality &amp; Performance</b>	Have performance tests (response time, load handling) been conducted?	<input type="checkbox"/>
	Is system reliability assessed (uptime, error rates, stability)?	<input type="checkbox"/>
	Has scalability testing been done for growth or high traffic?	<input type="checkbox"/>
	Are cloud architecture and resource utilization reviewed?	<input type="checkbox"/>

	Are logging and observability tools implemented and effective?	<input type="checkbox"/>
<b>Security &amp; DevOps</b>	Is the CI/CD pipeline configured in accordance with best practices?	<input type="checkbox"/>
	Are there any security vulnerabilities in code, integrations, or deployments?	<input type="checkbox"/>
	Is access control properly set so only authorized users have permissions?	<input type="checkbox"/>
	Are backup and disaster recovery procedures in place and tested?	<input type="checkbox"/>
	Are monitoring systems in place to alert the team to critical issues?	<input type="checkbox"/>
<b>Audit Timing / When to Conduct</b>	Is a software audit planned before scaling the application?	<input type="checkbox"/>
	Is a software audit scheduled before major releases or updates?	<input type="checkbox"/>
	Was an audit conducted during the MVP-to-Production transition?	<input type="checkbox"/>

	Is an audit planned before fundraising, acquisition, or technical due diligence?	<input type="checkbox"/>
	Are audits considered when performance or stability issues increase?	<input type="checkbox"/>
